

# Delphi Premium Acoustic Systems

### ► Description

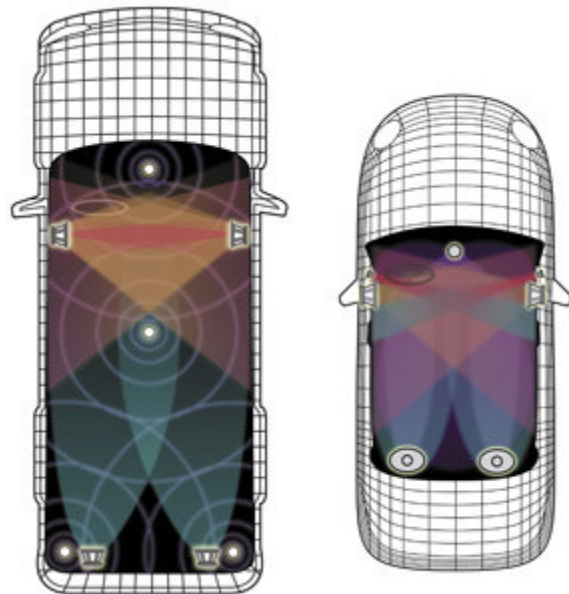

Delphi's Premium Acoustic System development begins in the early stages of vehicle development. We work closely with vehicle manufacturers to develop systems of high quality precisely matched to individual vehicles. Delphi marketing specialists make recommendations for feature and system content based upon extensive consumer research and market analysis, and our audio engineers assist in radio design, determine ideal system configuration for each specific vehicle, and intensify amplifier performance by electronically equalizing sound output.

### ► Benefits

- Customized systems to meet specific vehicle manufacturer requirements
- Premium audio performance
- Outstanding value
- Audio engineering and vehicle integration expertise
  - Optimal design for specific vehicles
  - Full range of support for distinct bus structures

### ► Features

- Customized audio system
- High-quality speakers
- Powerful audio amplifiers
- Electronically equalized output for improved dynamics, spectral range and sound distribution
- Precisely matched electro-mechanical parameters of woofers and subwoofers for optimal bass performance of specific speaker sizes
