

### Delphi MyFi™ 3D Navigation System

Designed specifically for the China market, the Delphi MyFi 3D Navigation System offers vehicle manufacturers an infotainment system that can differentiate their vehicles. Using 3D images, the system provides drivers lifelike images, elevated road recognition and multiple search / route options.

The Delphi MyFi 3D Navigation System can be seamlessly integrated with a Delphi multimedia system to offer compatibility with multiple playback formats including HDD, USB and flash. The system features a high-definition display and user-friendly touch screen operation as well as hands-free phone and rear view camera compatibility.

#### ▶ The Delphi Advantage

- Local design centers with access to global knowledge base
- Elevated road recognition enhances navigation usefulness in China market
- Configurable 3D surrounding view
- Flexible infotainment system configuration can interface with multiple vehicle systems, including:
  - Rear seat entertainment
  - eCall module
  - Digital TV
  - Climate control system

#### ▶ Features

- 3D navigation with elevated road recognition
- Powerful processing capability
- CD / DVD / HDD / SD /USB / portable device playback
- Easy to use music navigator and music manager
- Extensive suite of multimedia sources with integrated media search
- AM/FM radio
- Voice recognition for command control in Mandarin and English
- High-definition touch screen
- Real-time point-of-interest downloads
- POI search with initial POI characters in Pinyin

Delphi's MyFi 3D Navigation System provides lifelike road images to clearly show if the vehicle is traveling on the ground or an elevated roadway.

Delphi's MyFi 3D Navigation System provides a configurable angular view to clearly show the vehicle's surroundings.
