

Body Control Module for Emerging Markets

Leveraging its Body Control Module (BCM) expertise, Delphi offers a BCM specifically designed for emerging markets. The module offers the functionality expected in a standard BCM including an RF receiver for remote keyless entry and tire pressure monitoring at an attractive price.

Offering standard features such as lock control, interior/exterior lighting control and motor and relay drive outputs, the BCM is capable of interfacing with the vehicle's instrument cluster, HVAC and theft deterrent via CAN or discreet signals.

► Benefits

- Integrates typical features desired in emerging markets into one small package
- Uses standard production building blocks to minimize development time and provide low-cost, low-mass solutions
- Flexible feature functionality

► Features

- Door locks
- Remote keyless entry/tire pressure monitoring
- Anti-theft alarm
- Interior and exterior lighting
- Rear defog
- Heated mirror
- Front/rear wiper and washer
- Switch inputs (ignition, door ajar, seat belts, park brake, engine oil level, cruise, lighting, wiper/washer)
- Battery saver
- Temperature sensor
- CAN interface

Delphi uses standard production building blocks to minimize development time and provide low-cost, low-mass solutions specifically designed for emerging markets.
